Audit dataset images
Hash, pHash and label conflicts
Deduplicate before splitting
Freeze one split
Train / validation / calibration / test
Shared across seeds and formats
Train and export
Train-only weights and INT8 inputs
MobileNetV2 and EfficientNetB0
Select on validation
Temperature and one global +
one classwise rule per case
Freeze selected rules
Verify hashes before
calibration inference
Calibrate fixed rules
24 rules, 96 CP bounds
Failed rules deploy all-defer
Evaluate on held-out test
Primary results from frozen rules
Additional analyses post hoc
